

REVATHI TAMARANA

Visakhapatnam, Andhra Pradesh, India | +91-7032631195 | tamaranarevathi@gmail.com
 [RevathiTamarana](#) |  [revathi-tamarana](#) |  [Live Dashboard](#)

Career Objective

Final-year IT undergraduate with a strong foundation in SQL and Python, and hands-on experience building end-to-end analytics solutions — from data cleaning to dashboard deployment. Skilled at driving insights from data and translating them into action steps that support business decisions. Comfortable navigating unstructured problems independently, collaborating with cross-functional business partners, and adapting quickly in a fast-paced environment.

Education

Vignan's Institute of Engineering for Women Visakhapatnam, AP
Bachelor of Technology (B.Tech) – Information Technology 2023 – 2027
CGPA: 8.11

Andhra Pradesh State Board – Class XII (Intermediate) Andhra Pradesh
Higher Secondary Certificate (HSC) 2021 – 2023
Percentage: 92.2%

Technical Skills

- **Programming Languages:** SQL, Python, Java Fundamentals
- **Data Analysis & Visualization:** Pandas, Numpy, Matplotlib, Seaborn, Data Cleaning, Exploratory Data Analysis, Data Visualization
- **BI & Reporting:** Power BI (DAX, Data Modeling), Excel (Pivot Tables, VLOOKUP, Power Query, PowerPoint)
- **Business Analysis:** Requirements Gathering, Stakeholder Analysis, Process Mapping
- **Databases:** MySQL
- **Tools:** Jupyter Notebook, VS Code, Git/GitHub
- **AI Skills:** Generative AI Tools, Prompt Engineering

Projects

E-commerce Revenue Leakage Detection System *Individual Project | 2026*

- Built an analytics solution using SQL (joins, CTEs, window functions) and Python (Pandas, NumPy) to detect revenue leakage patterns across pricing, refunds, and discounts in an e-commerce dataset
- Cleaned and analyzed transactional data to identify anomalies and flag high-risk transactions for recovery
- Designed a Power BI dashboard to visualize leakage trends and support data-driven business decisions

Tech Stack: SQL, Python, Pandas, Power BI, Git/Github

Global Income Inequality Explorer *Individual Project | 2026* | [GitHub](#) | [Live Dashboard](#)

- Cleaned, validated, and merged World Bank Gini Index, GDP per capita, and population datasets, handling missing values, duplicate country-year records, and aggregate entities.
- Performed exploratory data analysis to identify global inequality patterns and trends across countries and years.
- Built and deployed an interactive Streamlit dashboard featuring country/year filters, KPI cards, inequality trend analysis, an interactive world map, and Top 10 country rankings.

Tech Stack: Python, Pandas, Plotly, Streamlit, Git/GitHub

FoodTrack – Food Delivery Order Behaviour Analysis *Individual Project | 2026*

- Built and analyzed a synthetic food delivery dataset (10,000+ orders, customers, and restaurants) to uncover order behavior and delivery performance patterns
- Wrote SQL queries to identify peak ordering hours, top-performing cuisines, and delivery time trends across cities
- Performed exploratory data analysis using Python to detect cancellation and delay patterns during high-demand periods and delivery efficiency metrics

Tech Stack: Python, Pandas, NumPy, SQL, Power BI, Matplotlib, Seaborn, Jupyter Notebook

Certifications

Programming in Java – NPTEL

Data Analytics Job Simulation – Deloitte Australia (via Forage)

Achievements

Ideathon Tech Ritz – Recognition Award Recognized for presenting Fresh Fields, a sustainable agri-tech business model for direct-to-consumer produce delivery.
